At CGI, we offer Federal compliant, end-to-end cloud solutions with single-point accountability.

BUILT BY CGI TO ADDRESS FEDERAL-SPECIFIC NEEDS
As federal agencies increasingly turn to cloud computing to reduce capital expenditures, increase efficiency and speed of new services, and support innovation and data center consolidation, they can rely on CGI – a proven cloud services provider to government and commercial enterprises around the globe. CGI was the first large cloud services provider to earn FedRAMP provisional authority to operate (P-ATO and DISA P-ATO) for our U.S. federal government Infrastructure-as-a-Service (IaaS) community cloud, assuring agencies that we provide them the latest security controls and continuous monitoring to help secure critical IT assets.

We built our federal community cloud from the ground up to meet enhanced security requirements of our federal agency customers under the guidance of NIST 800-53 and FedRAMP. We architected our federal cloud using open standards to promote interoperability with reusable services to save agencies even more. CGI’s approach to cloud is different: the CGI cloud is focused on services that enable the IT mission, not merely commodity servers and storage. As an IT consulting firm supporting federal agencies for 40 years, we provide value-added services such as application portfolio cloud readiness assessment, transition management and security services.

SPEED OF MIGRATION AND IMPROVED SECURITY THROUGH FEDRAMP
FedRAMP is mandatory for Federal Agency cloud deployments and service models at the low and moderate risk impact levels. CGI is well ahead of other cloud service providers and was the first large cloud services provider and systems integrator to receive FedRAMP P-ATO. Agencies can leverage the FedRAMP P-ATO, augmenting with agency-specific controls only as needed, to reduce costs. Instead of taking months to achieve authority to operate, solutions in CGI’s cloud have been deployed with agency ATO in just weeks from contract award.

If your agency determines that a private cloud solution more effectively meets your cloud needs, partnering with CGI for private cloud solutions provides the assurance that your service provider understands the complexities of federal security requirements and can ably secure your most important applications and data.
TAILORED AND COST-EFFECTIVE

CGI’s experts work closely with our clients to develop agency-specific cloud solutions. By utilizing your existing framework, we can develop an approach that manages your risks and addresses your security concerns. We work to make your transition to the cloud seamless, painless and cost-effective.

MORE THAN SERVERS AND STORAGE – VALUE-ADDED CLOUD SOLUTIONS

Current federal agency cloud clients benefit from our solution-focused services such as web content management solutions, content delivery network solutions, and co-location—enabling side-by-side hosting of virtualized and physical environments to meet transactional and/or specialized performance requirements. Whether your agency wants to pilot a public website in the cloud, move from a cumbersome enterprise-wide application hosting model to a SaaS model or transition its entire portfolio of applications from disparate data centers to a private cloud solution, CGI has the expertise and know-how to help agencies accomplish these objectives cost-effectively.

ONE VENDOR, MANY SOLUTIONS

CGI’s approach to cloud is unique: our cloud solutions are focused on a broad set of services and solutions. We don’t merely deliver low-cost servers and storage – we enable the entire IT mission.

CGI delivers centralized, simplified, highly secure and fully managed solutions specifically designed to support Federal agency needs. We offer CGI Unify360™ as a unified platform for brokering, governing and operating cloud solutions. As a major cloud provider and industry-leading government systems integrator, we offer a complete cloud portfolio with the ease of single-point accountability.

CGI DIFFERENTIATORS

- FedRAMP P-ATO and DISA P-ATO
- High-touch, customer-centric service model with global presence
- Business-centric analysis and transition planning
- Automated cloud service management via secure portal
- Enabling IT professional services to meet business and mission needs
- Continental United States (CONUS) data centers staffed by U.S. citizens
- Flexible, secure cloud infrastructure designed and built for government
- Standards-based cloud technology supports interoperability

ABOUT CGI

Founded in 1976, CGI is one of the largest IT and business process services providers in the world. We combine innovative services and solutions with a disciplined delivery approach that has resulted in an industry-leading track record of delivering 95% of projects on time and within budget. Our global reach, combined with our proximity model of serving clients from 400 locations worldwide, provides the scale and immediacy required to rapidly respond to client needs. Our business consulting, systems integration and managed services help clients leverage current investments while adopting technology and business strategies that achieve top and bottom line results. As a demonstration of our commitment, our client satisfaction score consistently measures 9 out of 10. Visit cgi.com for more information.
